Growth is real — and it is accelerating again in 2026

1.36m trips in 2025 — a record year (+7.0% YoY).

Trips grew +10.5% a year, 2019–2025 (CAGR).

2026 Jan–Sep: 1.23m trips, +19.2% vs the same months of 2025.

But the revenue proxy lags: trip-minutes grew only +4.7% a year, 2019–2025 — mean trip length fell 23.3 → 16.8 min (−28%).

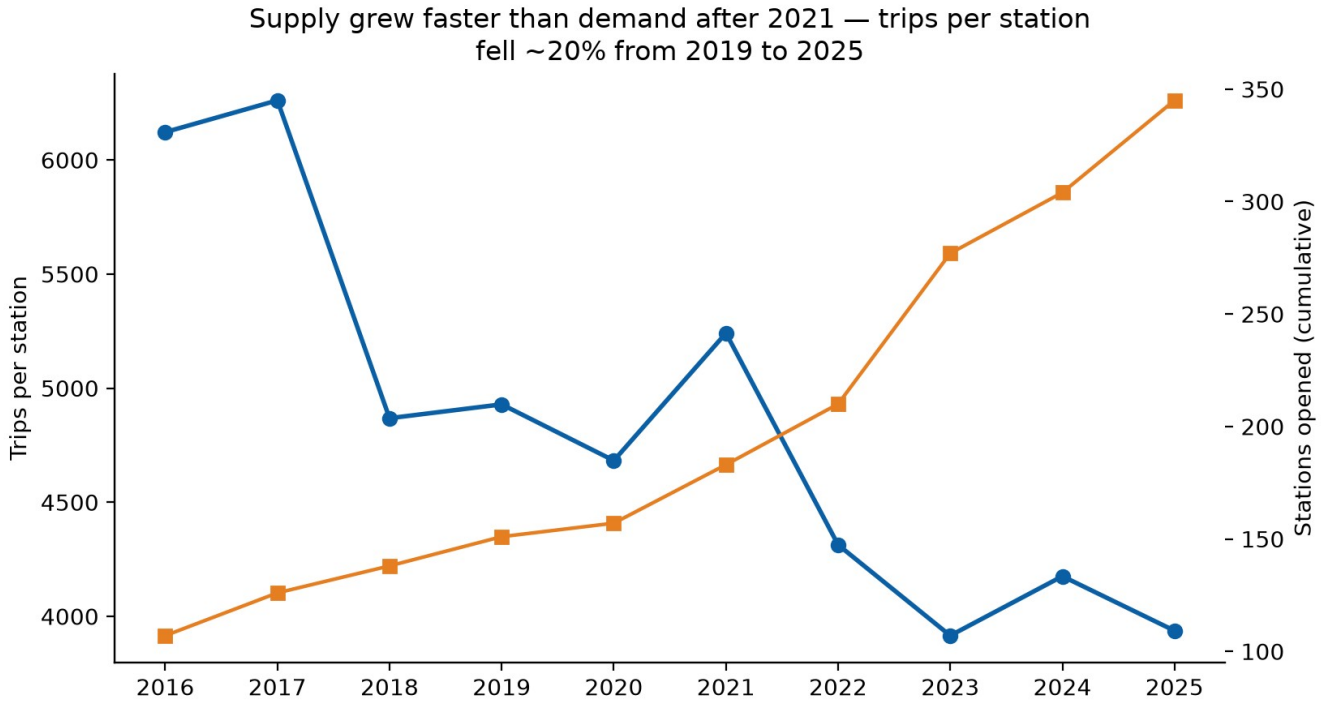

Q1 2026 was soft (+2.1% YoY); Q2 (+32.1%) was flattered by the FIFA World Cup and a weak 2025 Q2 base.

July runs ~2.6× January — never compare sequential quarters.

RECOMMENDATION — Measure growth as like-for-like YoY change in trips AND trip-minutes (the revenue proxy) — not raw totals, not quarter-on-quarter.

Source: Indego quarterly trip files, rideindego.com/about/data (2015 Q2–2026 Q3, 10.83m trips). 2026 = Jan–Sep only. Trip-minutes = sum of trip durations; revenue is assumed to be driven by trip duration, per the brief.

Grow by deepening the core — capacity and conversion first

Supply ran ahead of demand: stations 151 → 345 (end-2019 → end-2025, +128%); trips per station fell 4,929 → 3,937 (−20%).

E-bikes are the growth engine: 14% of trips in 2019 → 66% in 2025 → 73% in Jan–Sep 2026.

Casual riders are back: 6% of trips in 2023 → 11% in 2025 → 13% in 2026 — events convert first-timers, if we catch them.

Peak-day strain is real: 8,820 trips on 19 Jun 2026 (Juneteenth) — 2.4× the 2025 daily average (3,721); the 10 busiest days ever are all in 2026.

2026 demand (+19.2% Jan–Sep) is now absorbing the 2023–25 capacity build — utilisation is recovering, not collapsing.

RECOMMENDATION — Deepen before widening: add docks and e-bikes in high-demand core zones, convert casual/event riders to passes, and gate new stations on utilisation.
